CARVED PIERCING EMBELLISHMENT

with Mark Laub

Adding thoughtful, original details can turn your work from ordinary to extraordinary. By developing your own approach to embellishment, you can add your own personal signature to your work making it singularly your own.

In this class we will explore one such embellishment: carved piercing. This technique will enable you to add significant visual interest and appeal to your work. It will enable you to use contrasting woods and see-through transparency to both large cabinet casework or small box interiors. Piercing also creates “negative space” which adds an organic and light feel to your work.

In this class we will create a “tree of life” panel, starting with design and pattern preparation, continuing through all the drilling, scrolling, and carving steps. We’ll conclude with detailing and finishing options.

The class will consist of lively lecture, demo, and discussion and lots of hands on practice. Each participant will work on their own panel. All tools will be provided so the only thing you will need to bring are: (in order of importance): enthusiasm, curiosity and a notebook.

Enroll and begin your journey to making your work both original and artful!

This will be a hands on class held at the Paramount Tech Center
